

## Plastic Valves For Water Applications

### FIP Double Union PVC Ball Valves

The FIP VE ball valves are ideally suited to conveying water & harmless fluids. The valves are full bore, with double unions and a safe block design offering fully adjustable removable seats. Ball seats are made from PE-PTFE technopolymer with EPDM O-rings. Valves are available with a PVC body, imperial socket and BSP threaded ends.

### FIP PVC Butterfly Valves

The FIP FE Wafer Butterfly Valve is an effective solution for the isolation of larger pipe systems with a size range from DN 40 up to DN200 mm. Valves are supplied with EPDM seals and stainless steel shafts as standard. Gear boxes and actuators can be added and are available on request.

The FK lugged version can be used as an end of line valve by fixing the bolts directly to the valve body.

### Spears PVC Swing Check Valve

PVC utility swing check valves are ideally suited for a range of applications. Available either with or without a spring, they are an economic solution for ensuring flow in one direction only.

### Philmac Valves

Philmac valves are manufactured from glass reinforced polypropylene (GRP). Their simple rugged construction makes them ideally suited for use above or below ground in irrigation and water distribution lines. Philmac Ball Valves are M&I Marine approved.

### +GF+ Coloro Ball Valves

The "Coloro" PVC Ball valves from +GF+ are an economical valve, ideal for many commercial applications, including spa pools and swimming pools, where a high degree of chemical resistance is not necessary. With all PVC construction, and high quality seats made from PE/PTFE, their superior quality and design compared with other one piece valves provides a high level of safety. The two piece body is permanently fused around an integral ball and stem, providing a non-adjustable valve that will provide a long maintenance and service free life.

NOTE: This is a Run-Out range. A New valve range will replace these soon.
